1 The total amount of available memory will be less depending on actual system configuration with 32-Bit Windows operating system.

2 Based on the PCMark 05 hard drive benchmark tests performed by Dell Labs in October 2007 on the Dell Precision 390. Comparing the performance of a 73GB 15K SAS drive vs. the 160GB SATA 10K drive. Actual performance will vary based on configuration, usage and manufacturing variability.

3 Significant system memory may be used to support graphics, depending on system memory size and other factors.

4 For hard drives, GB means 1 billion bytes and TB equals 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less. With Dell Factory Image Restore installed, Windows Vista users will have 10GB of their hard drive capacity set aside for a recovery image.
